FIRM OVERVIEW

EliteTrax Sports Surfaces builds and resurfaces tennis, pickleball and basketball courts across Texas, Oklahoma, Arkansas, Missouri and Kansas, as prime contractor on public work and as the court specialty subcontractor to general contractors. We work with universities, municipalities, school districts, landscape architects, developers and private clubs to deliver court systems that perform over the long term, scheduled around active programming and tournament calendars. All work is delivered under direct technical oversight from an ASBA Certified Court Builder with more than 25 years of experience.

CORE SERVICES

- **New Court Construction.** Post-tension concrete courts engineered for long-term structural stability in variable soil and climate. Delivered as a stand-alone scope or turnkey, including drainage, fencing, LED lighting, net posts and surfacing.
- **Court Resurfacing.** Laykold acrylic surface systems that restore consistency, traction and playability on concrete and asphalt, outdoor and indoor, including full removal and mechanical preparation of failed coatings.
- **Conversion, Striping and Logos.** Tennis to pickleball conversions, hybrid layouts, USTA and USA Pickleball regulation line striping and custom center court logos.
- **Court Maintenance Programs.** Annual repainting, crack and joint repair and low-area correction, with multi-year pricing available. Modular tile courts as a VersaCourt authorized dealer and installer.

SURFACE SYSTEM

EliteTrax installs Laykold acrylic systems, the official surface of the US Open since 2020, engineered for consistent ball response, durability and reduced heat absorption versus traditional coatings. Available in USTA and USA Pickleball compliant configurations, standard and cushioned, over properly engineered post-tension concrete or asphalt.

TECHNICAL LEADERSHIP

Kevin Leach, CTCB, Technical Director

- ASBA Certified Court Builder
- Laykold Certified Applicator
- More than 25 years of court construction experience
- Post-tension concrete specialist

Sets the specification and oversees every project. **Justin Springfield, Managing Partner:** single point of contact from first call through closeout. **Carey Herron, General Manager:** job sites, crews and logistics.
